Backend engineer building distributed, low-latency systems in Java, Kotlin, and Go. Designed and scaled a Kafka telemetry pipeline to 4K+ TPS, delivered a zero-downtime QLDB-to-PostgreSQL migration on an equity-management platform, and shipped subscription features driving ~₹1 crore/month in recurring revenue.

SKILLS

Languages: Java, Kotlin, Go, Python, TypeScript

Backend & Distributed Systems: Spring Boot, Micronaut, Kafka, SQS, REST, gRPC, Protobuf, event driven architecture

Datastores: PostgreSQL, QLDB, Oracle, Cassandra; tiered storage (S3 + Glacier)

Cloud & Infra: AWS (EKS, ECS, S3, SES, SQS, EC2), Docker, Terraform, CI/CD (GitHub Actions, Jenkins)

Observability: Prometheus, Grafana, Micrometer, EFK and ELK Stack

Frontend: PrimeReact, TypeScript

Security: PII tokenization, OAuth2, RBAC, Keycloak

WORK EXPERIENCE

Sahaj Software/ Sahaj AI

Bengaluru, KA

Software Engineer II

Aug 2024 – Present

- **Jal Jeevan Mission telemetry pipeline:** initiated and drove the design (alongside two senior engineers) of a Kafka-backed streaming ingestion pipeline; built the MVP in **Java/Spring Boot** with async S3 writes and scaled it to sustain **4K+ TPS**, powering state-level dashboards. Instrumented with Micrometer/Prometheus/Grafana.
- **Sadhak equity platform:** single-handedly built the RSU (restricted stock unit) service covering the full grant and monetization cycle in **Kotlin/Micronaut** with a PrimeReact frontend; executed a **zero-downtime QLDB-to-PostgreSQL migration** and rewrote all dependent service entities.
- **Tata Motors Connected Vehicle Platform (~500K vehicles):** built two subscription-renewal systems in Java/Spring Boot — a long-term subscription handling Tata Communications (TCL) SIM-enablement APIs with local (Airtel/Jio) and global (Dutch provider) activation flows, and a **fleet subscription system driving ~₹1 crore of the platform's ₹1.5 crore/month** subscription revenue (grown ~30x from ₹5 lakh).
- **Fixed a data-correctness gap in EV telemetry** by replacing a fixed battery-health constant with the TCU's State-of-Charge (SoC) method, correctly accounting for regenerative-braking energy across the fleet.
- **Designed and implemented a PII tokenization service (Java/Spring Boot)** using salted/peppered hashing with distributed key division, enabling GDPR-compliant storage and controlled detokenization.
- **Built an internal Claude tooling layer** (skills and commands as markdown/JSON) that moved developers from manual prompting to autonomous, catalog-grounded workflows driven by simple business inputs.

Sahaj Software/ Sahaj AI

Bengaluru, KA

Software Engineer I

Jan 2024 – Jul 2024

- **Built an internal multi-tenant ML platform** to host, train, and deploy models; cut model deployment from hours to minutes via containerized pipelines on AWS ECS serving isolated Streamlit apps with automated teardown.
- **Orchestrated ephemeral ECS tasks** for reproducible model training in isolated runtime environments.

Audito (Headphone Marketplace)

Bengaluru, KA

Co-Founder - Exited

2023

- Built and deployed production web application on cloud infrastructure, handled orders and integrated Razorpay for payments; owned the full lifecycle from architecture to client ops to exit.

PROJECTS & OPEN SOURCE

- **Distributed Key-Value Store (Go)** — KV store with dual-hashing key distribution and gRPC/Protobuf transport, designed toward consistent-hash sharding for horizontal scale.
- **Second-hand price prediction (IEEE published)** — end-to-end ML pipeline: Selenium/Chromium web scraping feeding a 6-tree random forest reaching 93% accuracy.
- **Open source** — fixed a temp-cache indexing bug in Bruno's Postman-collection import; contributed an update-notification feature to Pulumi.

EDUCATION & AWARDS

B.Tech, Computer Science & Engineering (ML & Data Science) — PES University

C.N.R. Rao Merit Scholarship (top 20% by SGPA) · Runner-up, Hacktoberfest 2021 (PESU Hackerspace) · IEEE publication (second-hand price prediction).
