+91 90368 39908 | [siddhantjverma@gmail.com](mailto:siddhantjverma@gmail.com) | [LinkedIn](#) | [My Website](#) | Bengaluru, KA

Site Reliability / Platform Engineer with production ownership of Kubernetes, GitOps, and observability on AWS. Led full-cluster outage recovery and owned incident communications, drove SLA compliance to 99.9%+ across 10 services, and cut monthly cloud spend from \$3K to \$1.2K through ARM migration and infrastructure automation.

## SKILLS

---

**Orchestration & IaC:** Kubernetes (EKS), Terraform, Helm, ArgoCD, Crossplane, Docker

**Cloud:** AWS (EKS, EC2, ECS, S3, Glacier, SQS, IAM, VPC, NAT), Linux

**Observability:** Prometheus, Grafana, Micrometer, EFK, SLOs, alerting, incident response, P99 latency tuning

**CI/CD & GitOps:** GitHub Actions, Jenkins, ArgoCD, GitOps delivery, reproducible provisioning

**Cost & Reliability:** ARM/Graviton migration, autoscaling, orphaned-resource cleanup, runbooks, postmortems

**Security:** PII tokenization, OAuth2, RBAC, Keycloak, least-privilege IAM

**Languages:** Java, Kotlin, Go, Python

## WORK EXPERIENCE

---

### Sahaj Software/ Sahaj AI

Bengaluru, KA

Software Engineer II

Aug 2024 – Present

- **Led end-to-end recovery of a full production EKS cluster outage**, owning all client and developer communications throughout the incident; restored services and drove SLA compliance to **99.9%+ across 10 services** while cutting incident-resolution time ~50% by rebuilding alerting, runbook coverage, and postmortem culture for a 70+ engineer org.
- **Migrated cluster delivery from Rancher to a GitOps model (ArgoCD + Crossplane)** on EKS, enabling zero-downtime deployments and reproducible infrastructure; rebuilt and restored the entire environment from code after an accidental infrastructure deletion.
- **Cut monthly AWS spend from \$3,000 to \$1,200** by migrating builds from x86 to ARM/Graviton, reclaiming orphaned NAT gateways and EC2 resources via Terraform and scripts, and automating off-peak scale-down across distributed servers.
- **Designed and implemented a GDPR-compliant PII tokenization scheme** (salted/peppered hashing with distributed key division and randomized generation), enabling secure storage and controlled runtime detokenization from isolated production services.
- **Built observability from the ground up for a Kafka telemetry pipeline** — Micrometer, Prometheus, and Grafana dashboards tracking JVM and throughput metrics — supporting sustained ingestion at 4K+ TPS.

### Sahaj Software/ Sahaj AI

Bengaluru, KA

Software Engineer I

Jan 2024 – Jul 2024

- **Built on-demand ML demo infrastructure with Terraform and ECS:** each model upload triggered automated provisioning of an isolated, GPU-capable environment with a public domain (~5 deployments/week), with GitHub Actions tearing it down after 30 minutes of inactivity to eliminate idle GPU cost.
- **Extended provisioning to GPU workloads on EC2 g4dn instances**, enabling compute-appropriate environments without manual intervention.

### Audito (Headphone Marketplace)

Bengaluru, KA

Co-Founder - Exited

Jun 2022 – Aug 2022

- Built simple hosting on AWS for backend with 0 downtime and minimal cost; owned system architecture and lifecycle from start to end.

## PROJECTS & OPEN SOURCE

---

- **Resilient Key-Value Store (Go)** — built a KV store with dual-hashing key distribution and gRPC/Protobuf transport, designed toward consistent-hash sharding.
- **Open source** — Contributed an update available - notification feature for Neovim to Pulum; Personal project - published an opinionated, batteries-included Neovim setup creating a familiar minimum CPU utilization IDE

## EDUCATION & AWARDS

---

**B.Tech, Computer Science & Engineering (ML & Data Science) — PES University**

C.N.R. Rao Merit Scholarship (top 20% by SGPA, 40% tuition refund) · Runner-up, Hacktoberfest 2021 (PESU Hackerspace) · IEEE-published ML pipeline for second-hand price prediction (93% accuracy).
