

Siddhant Verma

+91 9036839908 | siddhantjverma@gmail.com | linkedin.com/in/siddhantjverma/ | notamrev.github.io/website

Site Reliability Engineer who turns unstable infrastructure into boring, reliable systems, and replaces manual ops with GitOps and automated incident response. I reduce overhead for developers and accelerate delivery for large teams.

SKILLS

Orchestration & IaC: Kubernetes (EKS), Terraform, Helm, ArgoCD, Crossplane, Docker, Ansible

Cloud: AWS (EKS, EC2, ECS, S3, Glacier, SQS, IAM, VPC, NAT, Route53, CloudWatch, RDS), Linux

Observability: Prometheus, Grafana, Micrometer, EFK, SLOs, alerting, incident response, P99 latency tuning

CI/CD & GitOps: GitHub Actions, Jenkins, ArgoCD, GitOps delivery, reproducible provisioning

Cost & Reliability: ARM/Graviton migration, autoscaling, orphaned-resource cleanup, runbooks, postmortems

Security: PII tokenization, OAuth2, RBAC, Keycloak, least-privilege IAM

Languages: Java, Kotlin, Go, Python, Shell, BASH

WORK EXPERIENCE

Sahaj Software

Bengaluru, KA

Software Engineer II

Aug 2024 – Present

- **Led end-to-end recovery of a full production EKS cluster outage**, owning all client and developer communications throughout the incident; restored services and drove SLA compliance to **99.9%+ across 10 services** while cutting incident-resolution time **~50%** by **rebuilding alerting**, runbook coverage, and postmortem culture in a **30+ engineer org**.
- **Cut monthly AWS spend** from **\$3,000 to \$1,200** by migrating builds from **x86 to ARM/Graviton**, reclaiming orphaned NAT gateways and EC2 resources via Terraform and scripts, and automating **off-peak scale-down** across distributed servers.
- Built **end-to-end observability** for a Kafka-based telemetry pipeline using **Micrometer, Prometheus, Grafana**, and **CloudWatch**, exposing JVM health, lag, throughput, and service-level **dashboards** that supported **sustained 4K+ TPS ingestion** and faster diagnosis of pipeline issues.
- Built **internal Claude-based operational tooling** that grounded prompts on internal service catalogs and **standardized repeatable workflows** for incident triage and ops tasks, reducing ad-hoc manual prompting and making response actions reusable across a **70+ engineering team** and multiple vendors/partners on the platform

Software Engineer I

Jan 2024 – Jul 2024

- **Designed and implemented a GDPR-compliant PII tokenization scheme** (salted/peppered hashing with distributed key division and randomized generation), enabling secure storage and controlled runtime detokenization from isolated production services.
- **Migrated cluster delivery from Rancher to a GitOps model (ArgoCD + Crossplane)** on EKS, enabling zero-downtime deployments and reproducible infrastructure; rebuilt and restored the entire environment from code after an accidental infrastructure deletion.

Software Engineer Intern

Nov 2023 – Dec 2023

- **Built on-demand ML demo infrastructure with Terraform and ECS:** each model upload triggered automated provisioning of an isolated, GPU-capable environment with a public domain (~5 deployments/week), with GitHub Actions tearing it down after 30 minutes of inactivity to eliminate idle GPU cost.
- **Extended provisioning to GPU workloads on EC2 g4dn instances**, enabling compute-appropriate environments without manual intervention.

Audito (Headphone Marketplace)

Bengaluru, KA

Co-Founder - Exited

Jan 2020 – Mar 2020

- Designed and operated the AWS backend architecture for Audito end-to-end, keeping the marketplace live through ~100 orders and ~₹40,000 in sales while maintaining low operating cost.

EDUCATION

B.Tech, Computer Science & Engineering (ML & Data Science) — PES University

C.N.R. Rao Merit Scholarship (top 20% by SGPA, 40% tuition refund); Runner-up, Hacktoberfest 2021 (PESU Hackerspace) · IEEE-published ML pipeline for second-hand price prediction (93% accuracy).

PROJECTS & OPEN SOURCE

- **Resilient Key-Value Store (Go)** — Built a Go key-value store with gRPC/Protobuf transport and dual-hash key distribution, exploring shard placement and failure-aware routing patterns toward consistent-hash-based horizontal scaling.
- **Open source** — Contributed an update-available notification feature for Neovim to **Pulumi**;
Personal project - published an opinionated, all-inclusive Neovim setup creating a familiar minimum CPU utilization IDE
